Special Master's Program on Sustainable Food Production and Management

Utilizing the know-how on international student education accumulated through the previous "Career Development Program on Food Safety" professors specializing in sustainable agriculture train international students to become "Specialists in Sustainable Food Production and Management.

Program Goals

This course aims to contribute to developing human resources in Asia by fostering highly specialized human resources who will serve as a bridge between Japan and Asia. We will develop human resources to improve environmentally friendly agricultural technologies in Asia and to promote high-quality, safe agricultural products and food products.
